

Sanyuan-strive to excellence

DEAR VALUED BUSINESS PARTNERS,

Clients who have grown up with us may remember, in 2021 we announced that we would open our new factory. However, due to the impact of the COVID-19 epidemic, the new factory has not been completed as scheduled. While, at present, everything is under construction in an orderly manner, some of the facilities are expected to be operational by the end of this year.

As the relocation of the new factory, we decided to run twisted pair cables/LAN cable by brand new production lines. The new lines are currently on order and expected to be used in mass production by March 1st 2023.

As you might have been aware, consistently maintaining high-quality at good price is what we are all about. Compared with the equipment that market mostly used in China, our upgraded production line featured as follows:

- **SOPHISTICATED**

More sophisticated line to meet the various and harsh demands. Multi-functions that bring production capacity up to 30% higher than competitors.

- **AUTOMATED**

More automated control with minimized human input, which achieves great efficiency, cost-effective.

- **ONLINE QUALITY DATA DETECTION**

The state-of-the-art measuring instruments are equipped with the lines which enable us to monitor the quality data without lagging.

- **STABLE AND RELIABLE**

Ensure long-term quality consistency and production efficiency.

In the slump of the whole industry, it is precisely because of your trust and support that we can keep our passion and sustainability and continue to grow and develop in the fierce competition. You are warmly invited to come visit us in China after the official completion of the new facility, so that we can fully show our Respect, Transparency and Loyalty to make the mutual relationship and partnership more solid further.
